

## YOU WILL NEED:

### Pegboards:

4 Large squares

### Other:

Scissors

Clear tape

Elastic cord

Quick-drying adhesive

Wire

### Bead Colors:

● Red - 28

● Tan - 18

● Glow in the Dark Green - 23

● Pastel Blue - 10

● Grey - 369

● Dark Grey - 184

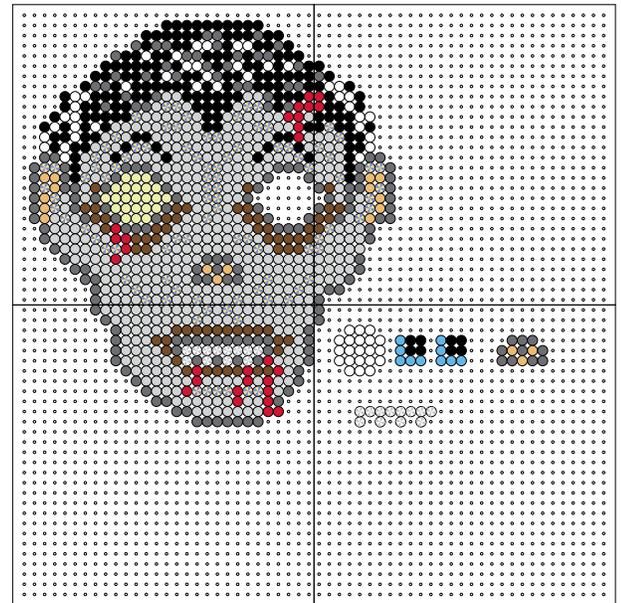

● Black - 173

● White - 62

● Starry Nite Stripe - 93

## Instructions

1. Assemble the four pegboards as shown at right. Cut the patterns out and tape together in the same way. If you are using clear pegboards, slide the actual-size patterns underneath them. Place your beads on the pegboards as shown.
2. Ask an adult to fuse your designs—see bottom for further instructions. NOTE: For this project, fuse ONLY the back side of the mask—fuse it securely but not flattened (bead holes should still be open. This will enable the mask to curve around the face more easily when worn.
3. **Assembly:** Eye: Glue the iris/pupil pieces to the front and back of the eyeball. Cut a 4" piece of wire and coil it around a pencil leaving a little at each end straight. Insert one end of the wire from front to back through a bead in the left eye socket on the mask. Bring the end back to the front through another bead and secure it around the coil. Attach the other end of the wire through a white bead on the eyeball in a similar way.
4. Nose and Mouth: Glue these pieces directly over the same areas on the mask.

5. Elastic cord: Insert one end of the elastic cord through a tan bead at the ear from back to front. Slide a dark grey bead onto the cord, then thread the cord through an adjacent bead to the back of the mask and knot. Repeat for other side.

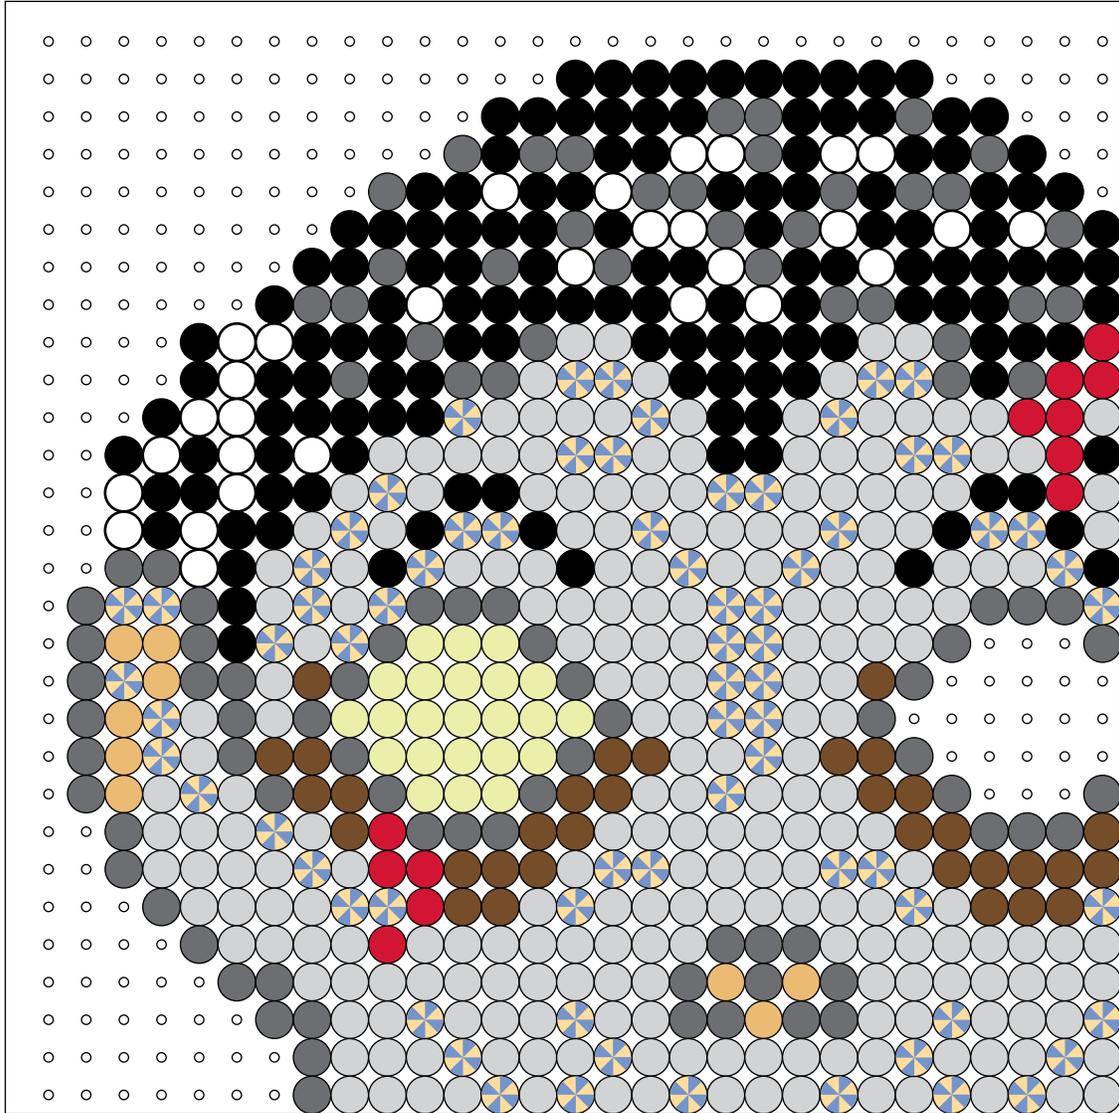

## Fusing Instructions—Only Adults Iron

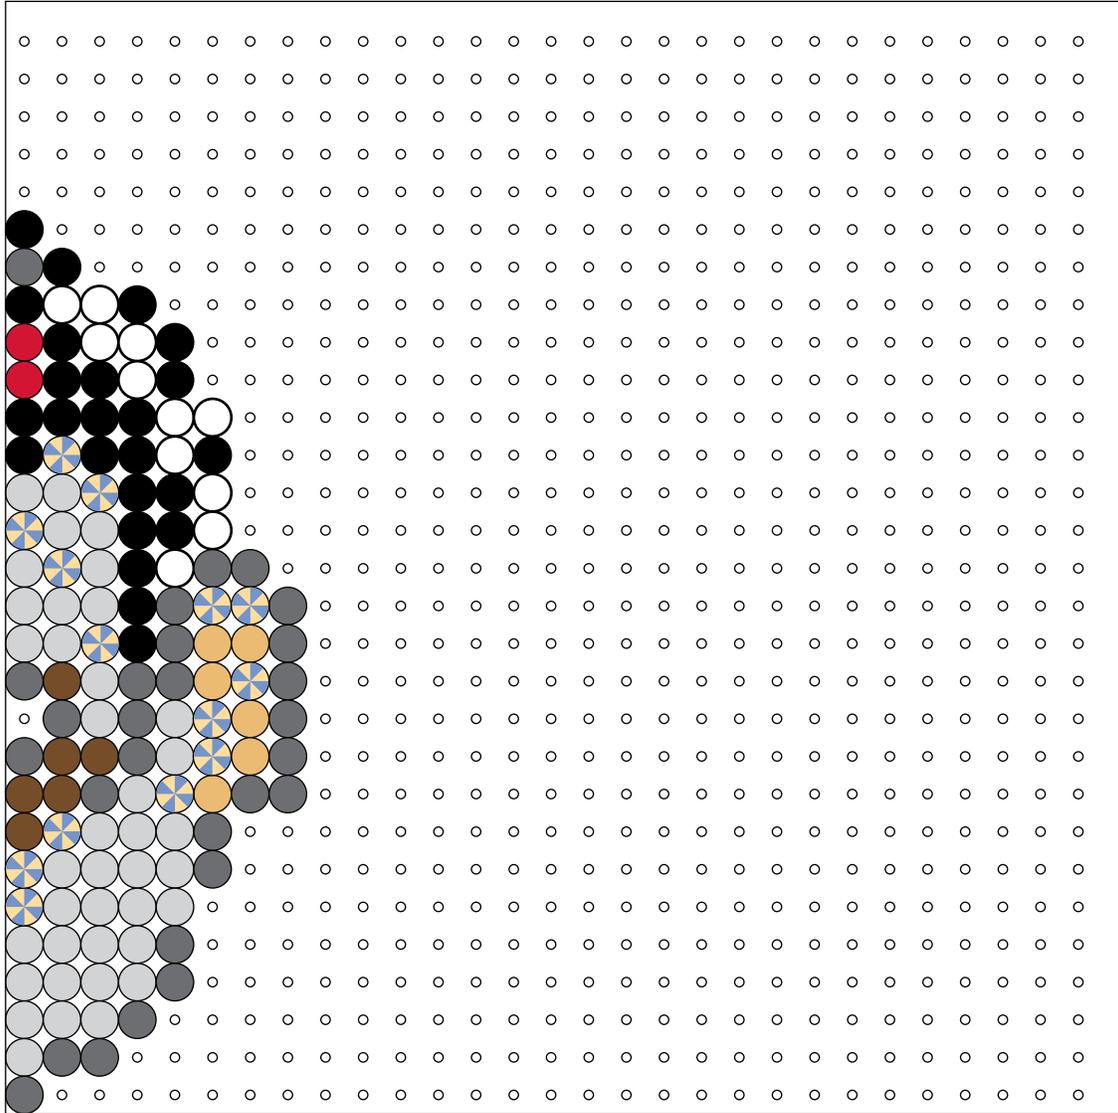

1. Place your pegboard on a flat, heat-safe surface.
2. Set a household iron to the medium setting. Place ironing paper over the pegboard. In a circular motion, begin to iron the project. Do not press down with the iron. As the beads begin to fuse, you will see circles of the beads start to show through the paper. When ironed properly, the beads will be securely fused to each other and will still have an open center.
3. Let the design cool.

**NOTE:** Beads need heat for about 10-20 seconds to fuse evenly. Lift the paper occasionally to see how the beads are fusing. Depending on the size of the project, additional heating time may be required. DO NOT OVER-IRON the beads as it will make the centers of the beads close and can make the assembly you do with your project more challenging.
